Module 3: Water Sustainability

Version 2.0 (March 2026)

Our Learning

Goals

- 💧 What is **water sustainability** and why is it important?
- 💧 **Water Consumption** and **Water Conservation**
- 💧 Simple and helpful tips on how to conserve water in our daily lives

Let's get started!

Topic 1

**Water
Sustainability**

Water Sustainability

“

Water Sustainability is the responsible management and use of water, in order for us to have enough clean water for current and future generations.

It involves **balancing** the needs of **people**, the **environment**, and the **economy** to maintain a healthy and resilient water system.

”

Can you think of different examples of water sustainability?

Water Sustainability

“
Water sustainability
be divided into four (4)
key parts:
”

Conservation

Protection

Equity

Resilience

Why is water sustainability important?

Health and well-being

Economic stability

Environmental protection

Social equity

How do you think water sustainability helps with these things?

Water-related laws in the Philippines

Water Code of the Philippines

- Protects all water resources within the country's jurisdiction
- Guarantees that water is used efficiently and sustainably, safeguarding it for the future

Code on Sanitation of the Philippines

- Sets the minimum health standards for WASH facilities
- It allows our water supplies to become more secure and accessible

Philippine Clean Water Act 2004

- Water quality management that protects, preserves, and improves the quality of fresh, brackish, and marine waters
- Supports economic growth while ensuring water resources are not compromised

The Water Quality Guidelines and General Effluent Standards

- Classifies water bodies in the country and provides a framework for preventing, controlling, and abating water pollution

The Philippine National Standards for Drinking Water

- The standards set for drinking water quality based on the World Health Organization guidelines
- An improved framework for monitoring, testing, and analyzing water safety and cleanliness

**How can we ensure that our
water is safe to use and drink?**

Topic 2 **Water
Consumption**

Water Consumption

“

Water Consumption is the amount of water used by individuals, households, industries, and agriculture

”

How much water do you use at home?
What do you use it for?

Consumption in The Philippines

“

Urban vs. Rural Communities

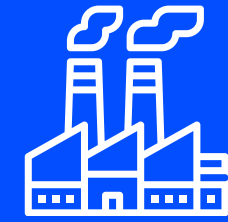

Urban areas tend to have higher water consumption rates. This is due to:

- higher population densitie
- more extensive infrastructure for individual water connections

”

20%

of our total water usage is from **industries and factories**

70%

of our total water usage from the **agriculture sector**

150
liters

average amount of water used in each **Filipino household** for drinking, cooking, cleaning, and bathing

Water Consumption and Sustainability

Be mindful of how much we consume from what is available

Understand what we need to ensure there is enough water supply for now and the future

Recognize the impacts of population growth and climate change on our consumption

**What are some helpful ways
for us to protect our resources?**

Topic 3

**Water
Conservation**

Introduction to Water Conservation

“

Water Conservation is when we manage our water resources responsibly, so that we minimize waste, protect our environment, and prepare for the future

”

What are some ways we can improve water conservation in our school?

Student Leaders & Super Teachers!

Learn about water-saving habits and teach others

Act mindfully when using water, such as turning off taps when not in use

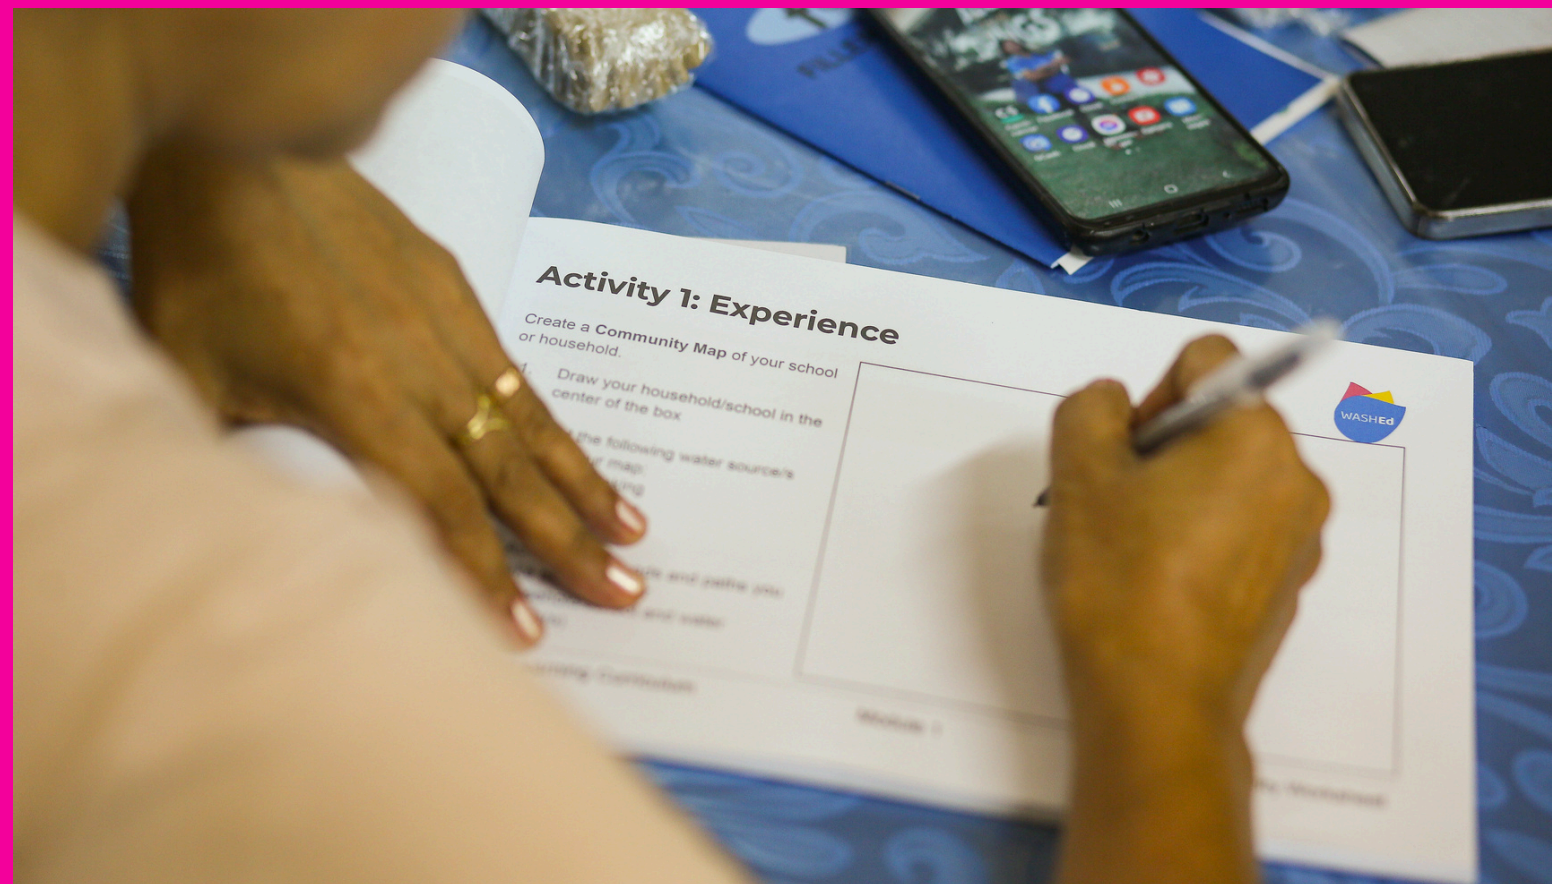

Encourage our school community to change the way we see and use water!

Activities

for Module 3

- Classroom activities are designed using the **E-SPOT Framework** to engage Active Learning
- **Think-Pair-Share** approach is recommended for all activities

Activity 1: Experience

Activity 2: Share

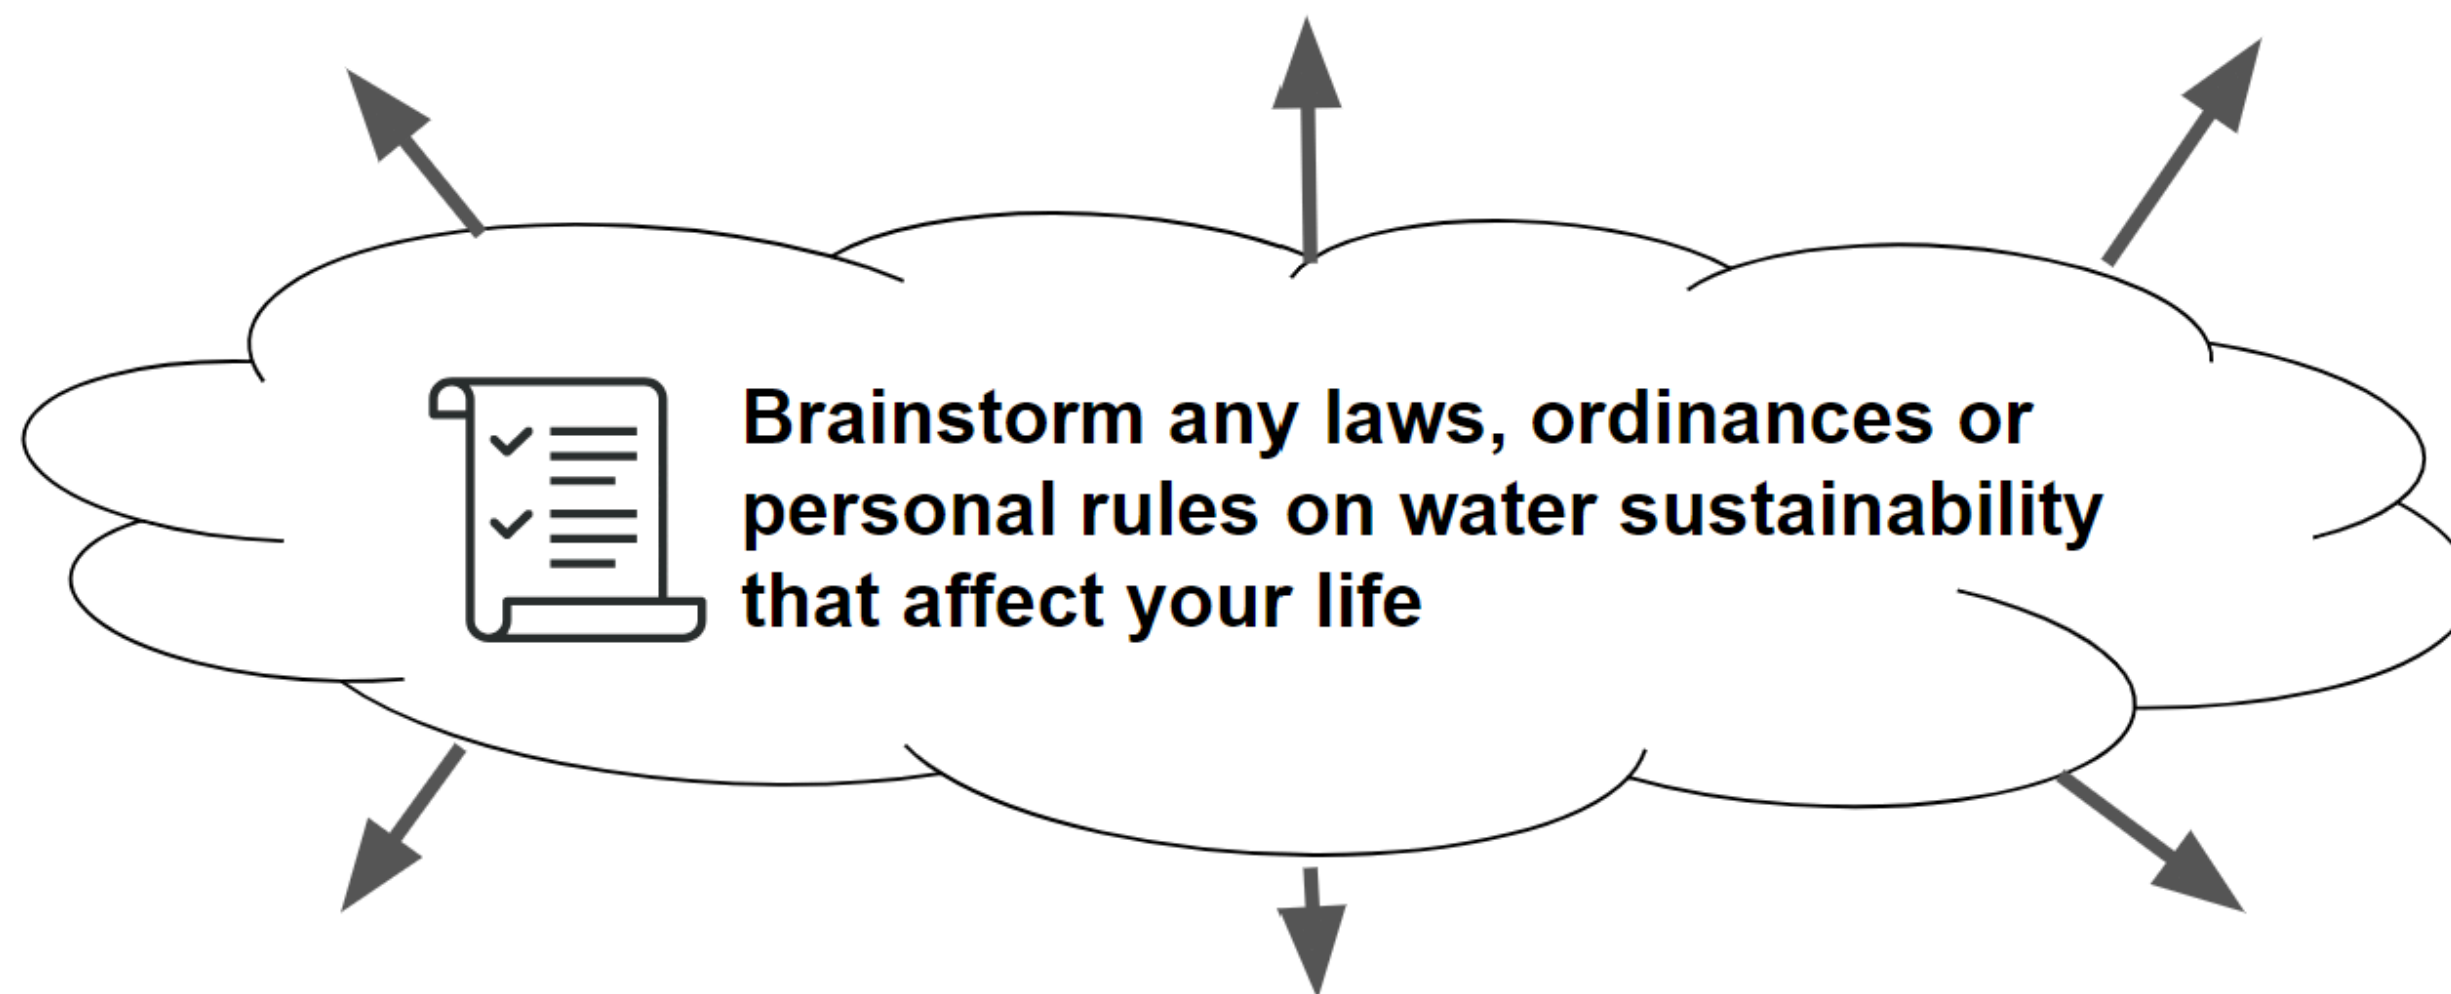

Activity 3: Process & Observe

Activity 4: Try

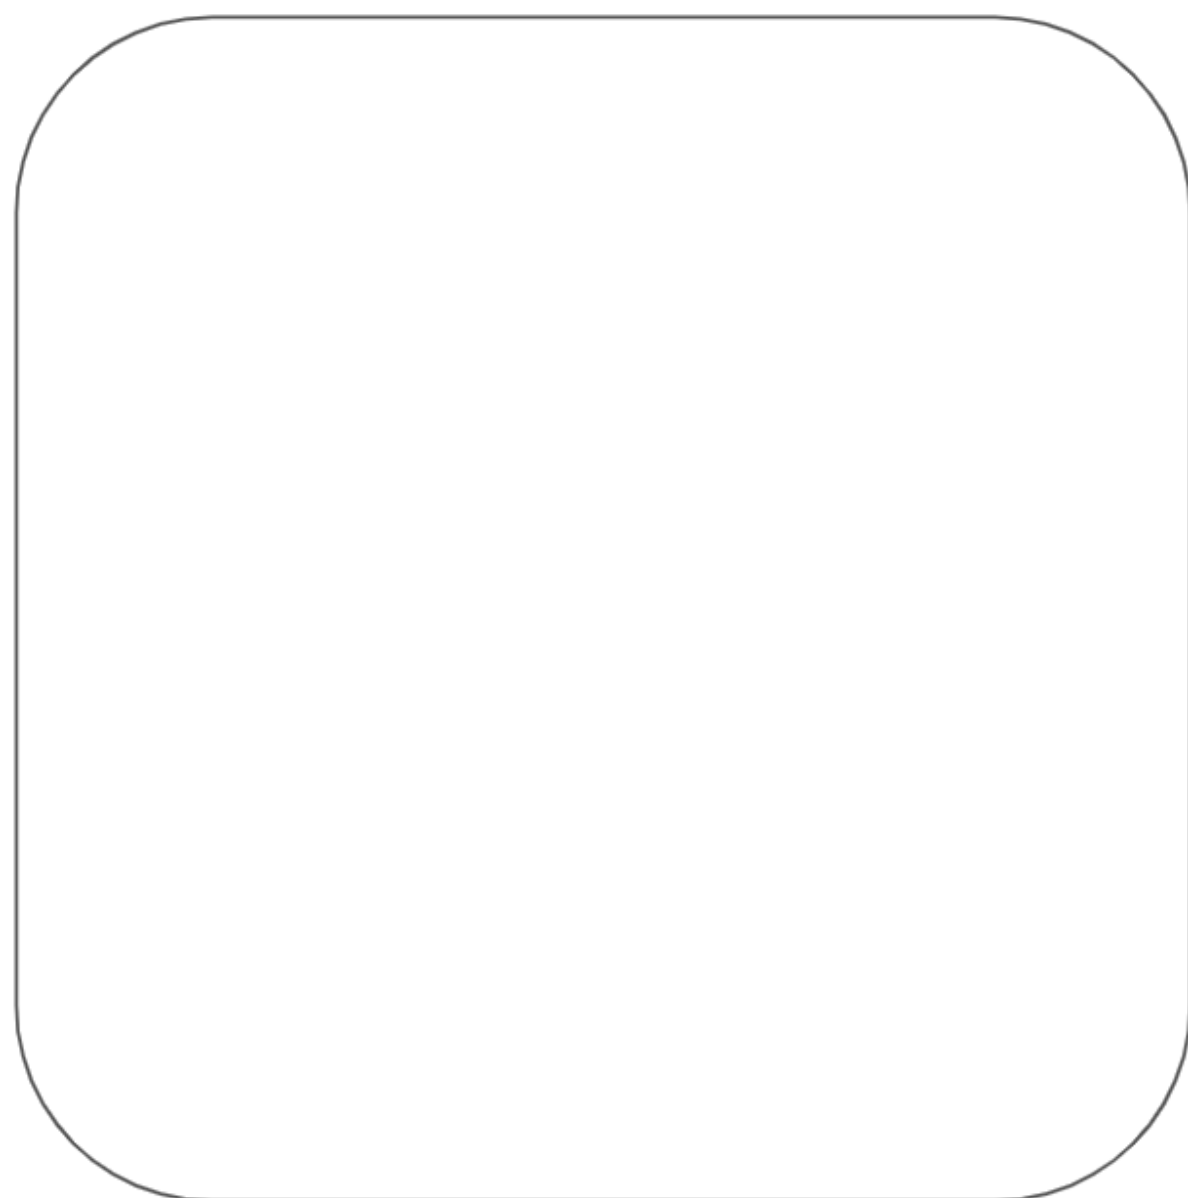

Digital files for the classroom activities will be available from the WASH-Ed Learning Portal

Activity 1: Experience

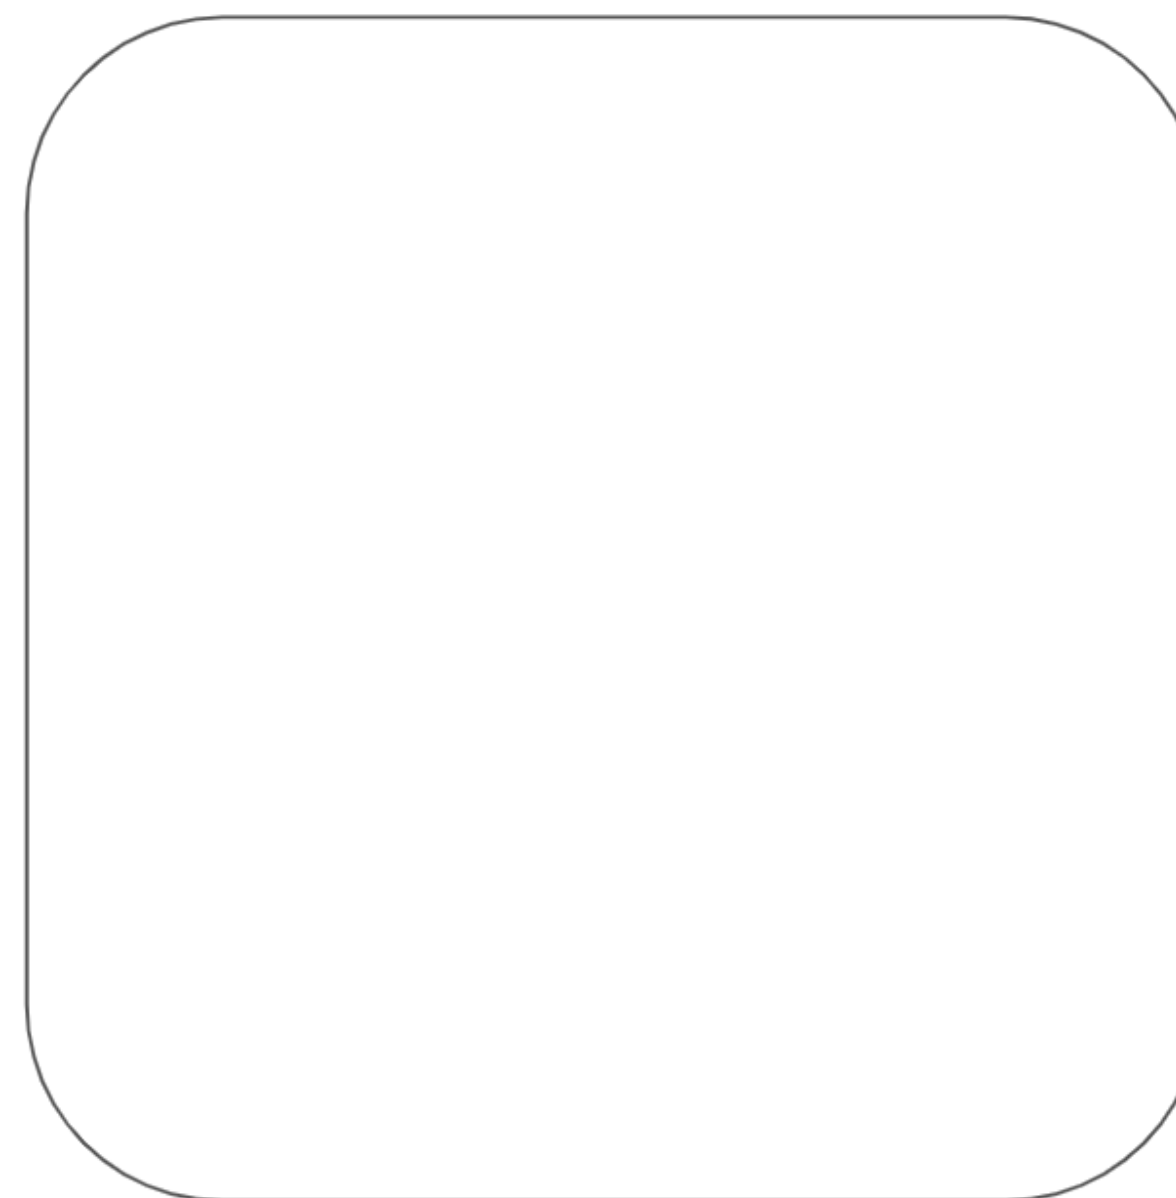

Activity 2: Share

- 1** In **pairs or groups**, list the different ways you are conserving water in your everyday life

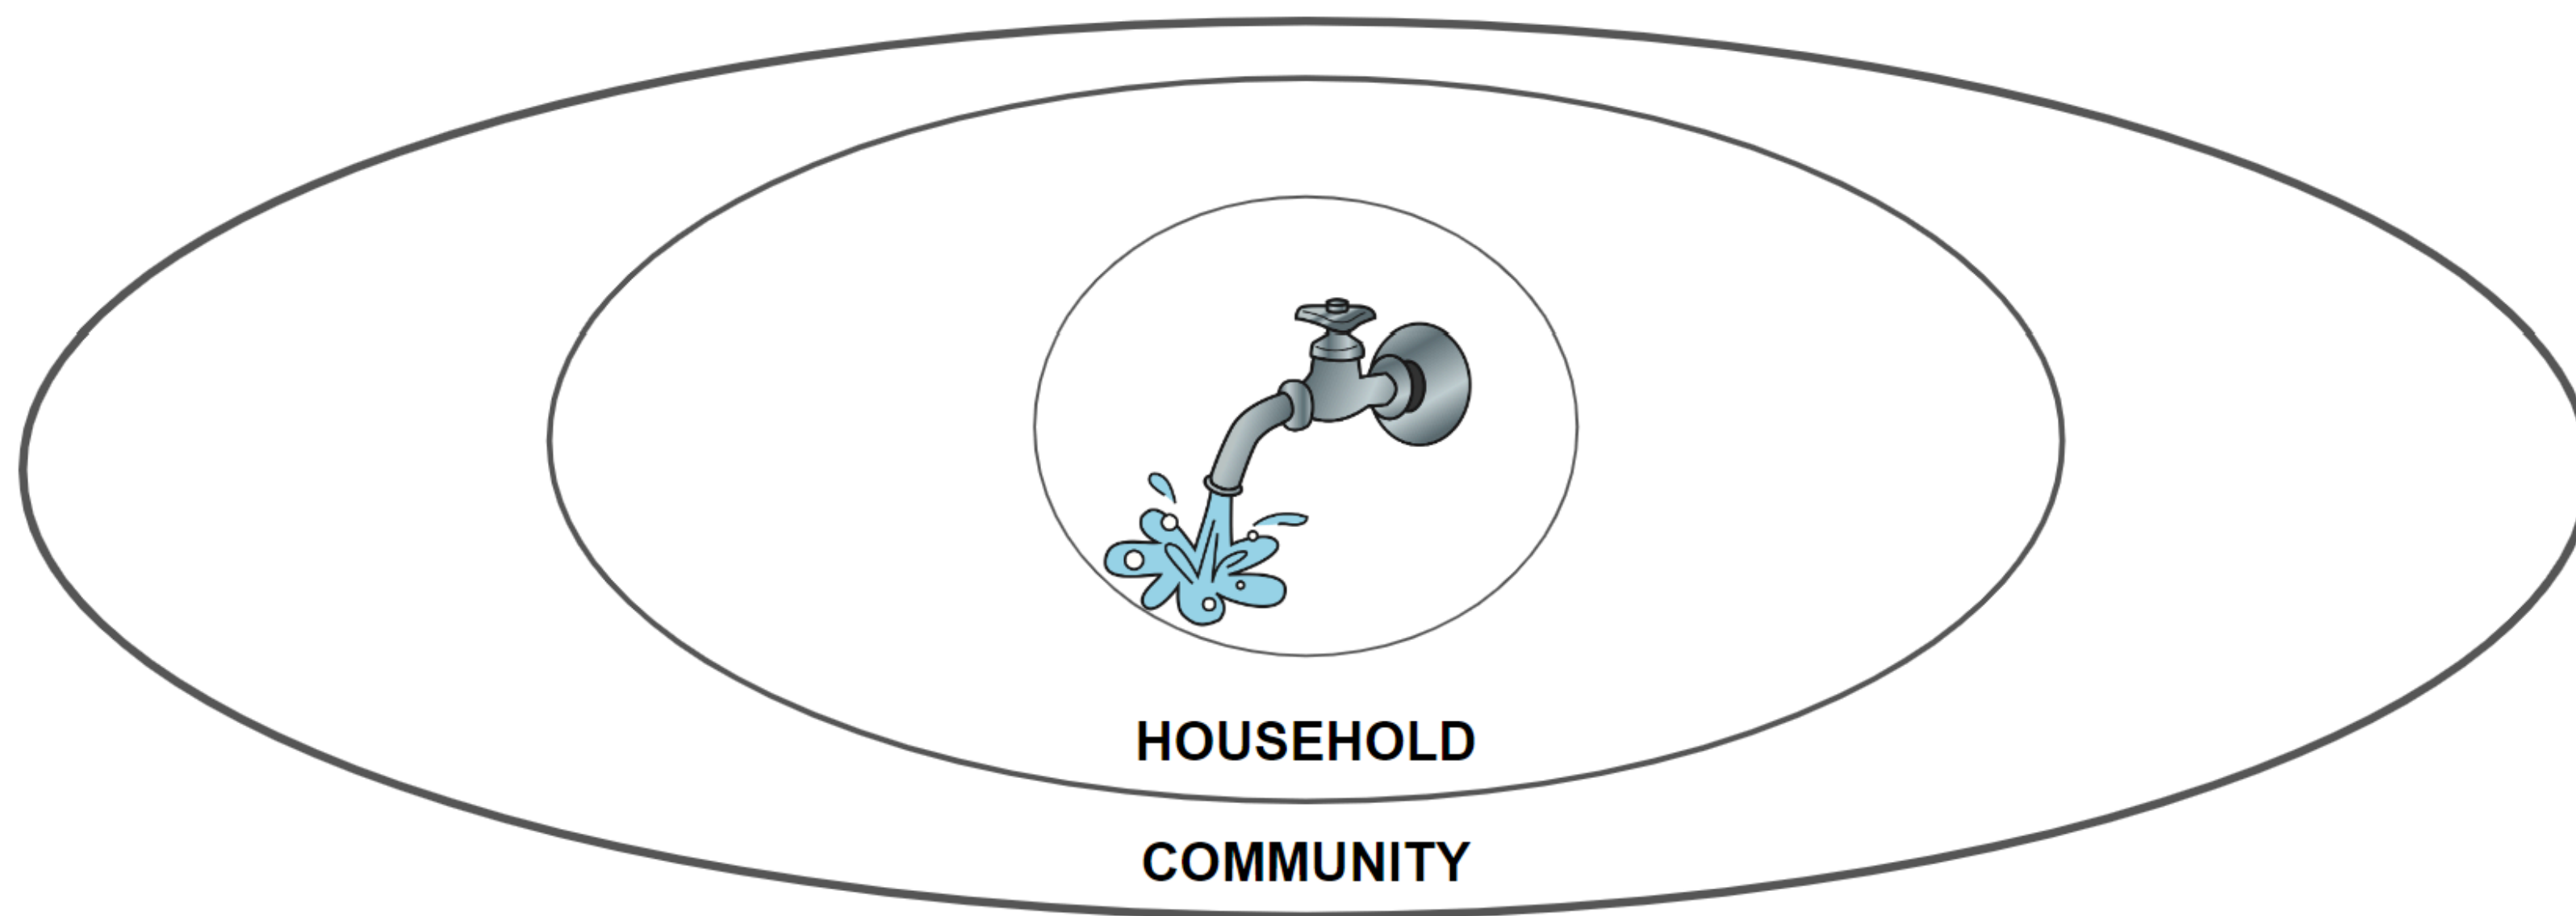

- 2** **What** are the barriers that stop people from conserving water?

Activity 3: Process & Observe

Wasting water at home has **consequences** that affect everyone.

1. For the **HOUSEHOLD** level, write down ways individuals may waste water at home
2. For the **COMMUNITY** level, write down ways in how water wastage at home can affect the community

Activity 4: Try

Create **one (1) novel and useful solution** you can introduce **TOMORROW**, to help the community save more water. This could be for your home, school, or the wider community.

**Describe your
innovative IDEA**

WHY will it work?

**WHAT resources do
you need to get
started?**

**Will you explore this
IDEA further?
Why / why not?**
