Module 3: Water Sustainability

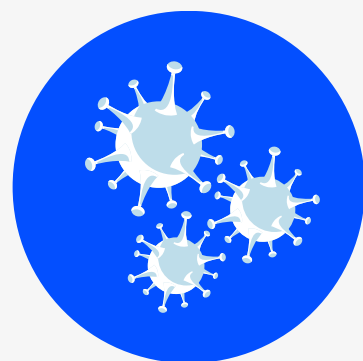

Version 2.0 (March 2026)

WASH-Ed Learning Curriculum

Module 1:

Water Resources & Accessibility

Module 2:

Water Safety & Health

Module 3:

Water Sustainability

Module 4:

Sanitation

Module 5:

Hand Hygiene

Module 6:

Disinfection & Other Hygienic Practices

WASH-Ed materials can only be used by the school and its teachers for the sole purpose of facilitating WASH education in partnering schools and should not be used, edited, altered, reproduced, or distributed to others outside this Purpose, without the consent of WASH Education Pty Ltd.

Our Learning

Objective

- 💧 **Explain** water sustainability and its impact on the community
- 💧 **Familiarize** yourself with national laws and local ordinances related to water sustainability
- 💧 **Discuss** the role of water consumption and water conservation when it comes to managing water sustainability
- 💧 **Propose** tips on how to conserve water in a simple way that inspires and makes sense to those with limited education

What We

Will Talk About

1	Water Sustainability
2	Laws and Ordinances
3	Water Consumption
4	Water Conservation
5	Check for Understanding
6	Activities to teach Module 3

Topic 1

Water Sustainability

Understand the importance of water sustainability and its impact on the health, economic stability, environmental protection, and social equity in our communities

01

Introduction to Water Sustainability

What is water
sustainability?

02

Relevance to Quality of Life

Why is understanding
it important?

Introduction to Water Sustainability

Refers to the **responsible management** and use of water resources to ensure that there is enough clean water for **current** and **future generations**.

It involves **balancing** the needs of **people**, the **environment**, and the **economy** to maintain a healthy and resilient water system.

Introduction to Water Sustainability

Water sustainability be described by four (4)
key components:

1

Conservation

2

Protection

3

Equity

3

Resilience

Relevance to Quality of Life

Improving water sustainability in our communities will benefit the use, reach and impact of this finite resource

Health and well-being

Economic stability

Environmental protection

Social equity

How do you think these areas benefit from water sustainability?

Topic 2 **Laws and Ordinances**

Understand the key laws and ordinances that protect water resources in the Philippines to effectively educate others and support initiatives aimed at achieving water sustainability

01

Overview of Water-related Laws

How are our leaders protecting our
valuable water resources?
What laws and ordinances should we be
acquainted with?

An overview of Water-related Laws

1 Water Code of the Philippines

National Water Resource Board

- Protects all water resources within the country's territorial jurisdiction
- Guarantees that water is used efficiently and sustainably, safeguarding it for future generations

2 Code on Sanitation of the Philippines

Department of Health

- Sets the minimum health standards for the construction and location of WASH facilities
- By adhering to these standards, our water supplies become more secure and accessible

An overview of Water-related Laws

3 Philippine Clean Water Act 2004

Environmental Management Bureau

- Establishes comprehensive water quality management to protect, preserve, and improve the quality of fresh, brackish, and marine waters
- Aims to supports economic growth while ensuring water resources are not compromised

4 The Water Quality Guidelines and General Effluent Standards

Environmental Management Bureau

- Classifies water bodies in the country and provides a framework for preventing, controlling, and abating water pollution

An overview of Water-related Laws

5 The Philippine National Standards for Drinking Water

Department of Health

- Based on the WHO guidelines, the standards set parameters for drinking water quality
- They provide an improved framework for monitoring, testing, and analyzing water safety and cleanliness

Topic 3 Water Consumption

Understand the patterns of water consumption in the Philippines and the implications for infrastructure and resource management

01

Introduction to Water Consumption

What can we check to help ensure the water is safe to consume?

02

Consumption in The Philippines

How might we differentiate water quality parameters to simplify our understanding?

03

Relevance to Water Sustainability

How might we differentiate water quality parameters to simplify our understanding?

Introduction to

Water Consumption

Refers to the amount of water used by individuals, households, industries, and agriculture

How much water do you use at home? What do you use it for?

Consumption in The Philippines

150 LITERS

Average amount of water consumed in each Filipino household for drinking, cooking, cleaning and bathing

70%

of nation's total water usage from the Agriculture sector

20%

of nation's total water usage from industry (e.g. manufacturing, energy production)

Urban vs. Rural Communities

Urban areas tend to have higher water consumption rates. This is due to:

- higher population densitie
- more extensive infrastructure for individual water connections

Relevance to

Water Sustainability

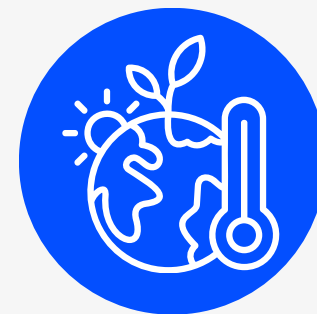

Learning about water consumption is important because it allows us to:

Be conscious of how much we consume from what is currently available

Understand what infrastructure is needed to ensure there is adequate water supply for current and future-based needs

Understand the impacts of population growth and climate change on our consumption

Topic 4 Water Conservation

Understand the importance of water conservation, the strategies to manage water resources efficiently, and how to implement these practices within communities

01

Introduction to Water Conservation

What is water conservation?

02

Role of Educators

What role can we play in improving water conservation in the community?

Introduction to **Water Conservation**

Refers to the practice of using water efficiently to reduce unnecessary water usage, ensuring the sustainability of water resources through responsible water management

Role of Educators

One of the most effective ways to improve water conservation is through education and awareness

Educate and empower students to incorporate water-saving habits

Promote mindful water use such as turning off taps when not in use

Initiate school-wide campaigns to foster a culture of conservation

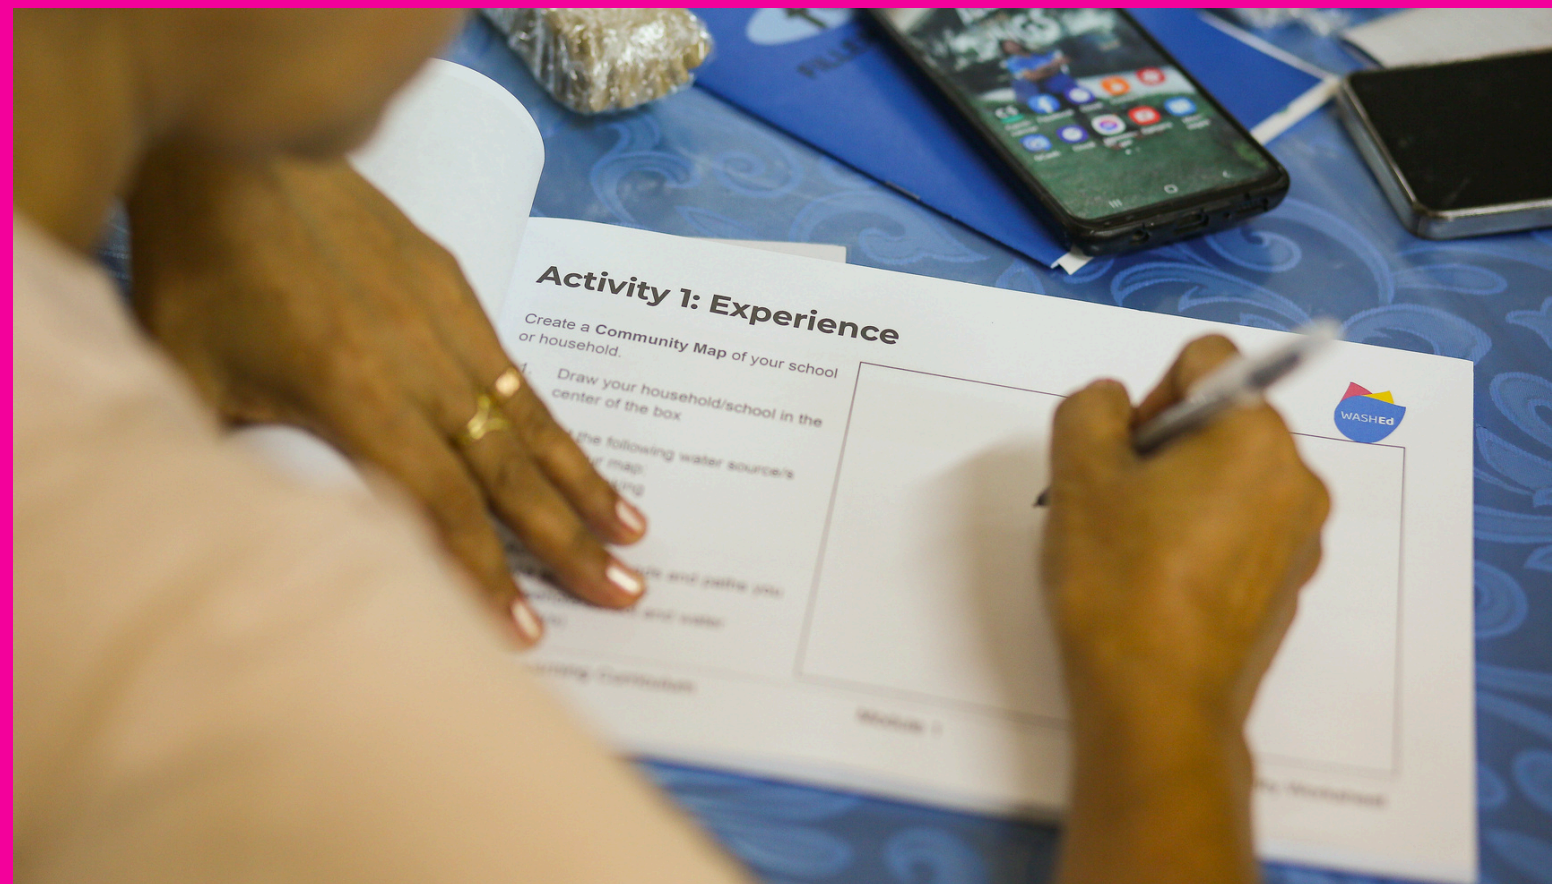

What are other tips you believe educators can do to improve water conservation at school?

Activities

to teach Module 3

- Classroom activities are designed using the **E-SPOT Framework** to engage Active Learning
- **Think-Pair-Share** approach is recommended for all activities

Activity 1: Experience

Activity 2: Share

Activity 3: Process & Observe

Activity 4: Try

Digital files for the classroom activities will be available from the WASH-Ed Learning Portal

Our Learning

Objective

- ✓ **Explain** water sustainability and its impact on the community
- ✓ **Familiarize** yourself with national laws and local ordinances related to water sustainability
- ✓ **Discuss** the role of water consumption and water conservation when it comes to managing water sustainability
- ✓ **Propose** tips on how to conserve water in a simple way that inspires and makes sense to those with limited education

Congratulations

WASH
Education

You completed **Module 3: Water Sustainability**

JOIN

our community and
let's stay connected!
